KaeMix Installation (1/2)

- KaeMix requires 64-bit Windows and a screen display resolution of 1360x768 or greater
- Download and unzip SetupKaeMix*.zip
- Launch SetupKaeMix*.msi
- Follow the steps in the Setup Wizard
- Leave the default settings in the *Select Installation Folder panel*.
 - Default installs in
[User] \AppData\Local\KaeMix
 - Do not install in Windows systems folders (such as C:\Program Files). May not have required write permissions or security software may block writing
 - KaeMix creates
[User] \AppData\Roaming\KaeMix to save settings and temporary files

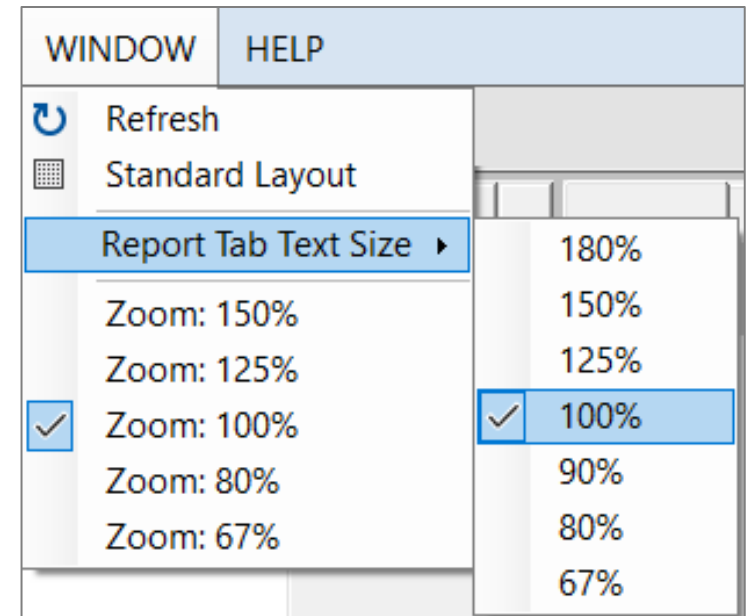

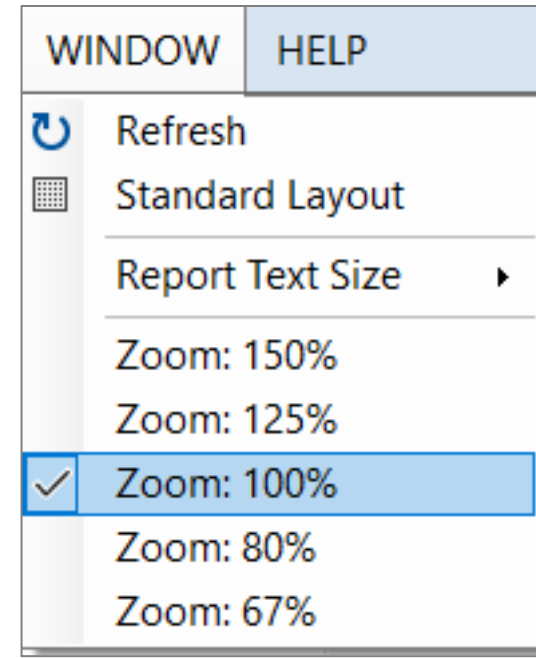

KaeMix Installation (2/2)

- KaeMix Student requires Microsoft .Net 8.0 to run
- To install this, run the file named:

`windowsdesktop-runtime-10.0.1-win-x64.exe`

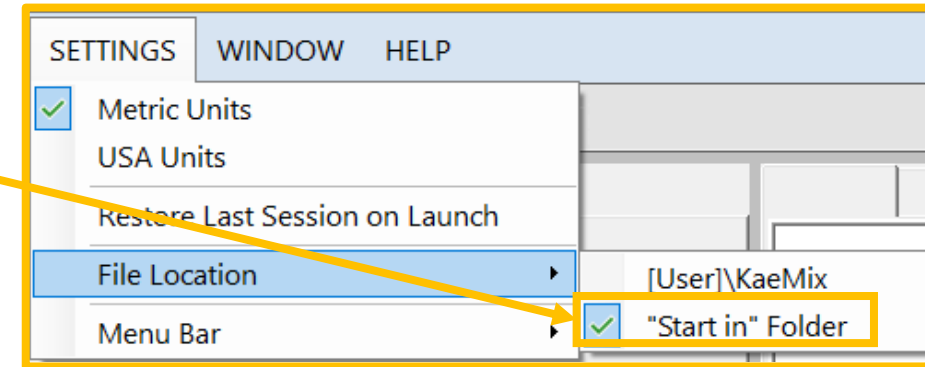

Monitor Display Settings

- KaeMix works well with a variety of display resolutions
 - Minimum display resolution is 1360x768
 - Recommended is 1920x1080 or better (most common desktop monitor and HDTV resolution)
- The KaeMix window size is determined by the zoom factor (Window menu)
 - At launch, KaeMix checks display resolution and automatically selects optimum zoom setting
 - If needed, can be changed manually, useful for setup with multiple monitors with different display resolutions
 - Text size in the Report tab can also be changed if needed

Settings – File Location

- You can control where KaeMix files are saved
- Default is [User]\KaeMix folder and usually looks like this: "C:\Users\yourname\KaeMix"
- To save in another location, select *"Start in" Folder* instead
- Specify the *"Start in" Folder* as follows
 - Right click on the KaeMix icon on the desktop and then click on Properties
 - Then specify the "Start In" folder and click Apply. Next time you launch KaeMix it will default to the "Start In" folder that you specified here

Built In Examples

- After launching KaeMix you can start exploring from File → Open Examples
- This will open a file with multiple examples that highlight KaeMix's capabilities
- If Open Examples is grayed out it means that KaeMix can not locate the file named Examples*.kaemix
- In that case copy the file [User] \ AppData\Local\KaeMix\KaeMix* \ Examples*.kaemix to the KaeMix file folder (specified under Settings → File Location)

Troubleshooting

- If KaeMix hangs for a long time when launching, do the following:
 - Close all open KaeMix sessions
 - Use the Task Manager to close any remaining, hanging, KaeMix sessions
 - Use Windows File Explorer to browse to `[User]\AppData\Roaming\KaeMix` which is where it saves settings and temporary files
 - Remove the files named `LastSession.KaeMix` and `~restorelastsession`
 - Launch KaeMix again
- If the Report tab in KaeMix is blank and does not show a report, the most likely cause is that Windows blocks writing to the KaeMix installation folder. This can happen if KaeMix is installed to a systems folder such as `C:\Program Files`. In that case uninstall KaeMix using *Add or Remove Programs* in the *Windows Control Panel*. Then reinstall KaeMix to the default installation folder `[User]\AppData\Local\KaeMix`

Removing Old KaeMix Installations

To remove older KaeMix versions, use *Add or Remove Programs* in the Windows Control panel as shown below

1 Type *add or remove programs* in the Windows search box

2 Click on *Add or remove programs* in the menu

3 Windows will show **Apps > Installed apps**. Type *kaemix* in the search box

4 Click on the three dots ... next to the version you wish to remove

5 Click *Uninstall* in the pop-up menu

6 Click *Uninstall* in the pop-up window. Windows will then start the uninstall process.

END
